Summary

I was coding PHP, specifically Laravel framework. Eventually, I moved to Ruby, Ruby on Rails.

I used Sidekiq, devise, Pundit and other interesting ruby gems of Ruby on Rails tech stack. RSpec is used for testing. Code properly checking it using robocop / rubocop-performance / rubocop-rails.

I use PostgreSQL as a database. Worked with MySQL and Redis particularly for caching. Working in analytical company I was mostly operating with column-oriented database called ClickHouse.

Possess SQL, can structure and normalize relational database.

Have skills in bash programming language being Linux user. You could check scripts out in my dotfiles github repository.

Have experience in Lua with my neovim config and that was a fun learning experience.

Consider I could be suitable for position suggested. Here is my github account where you can find my preferences and experience.

Experience

Backend Developer

BITQUERY

USA, NYC

January 2021 - present

- Designed and structured ClickHouse database schema. Optimized SQL getting from GraphQL API for better performance.
- Developed ETL parser to collect data about Elrond, Everscale and Flow cryptocurrencies.
- Realized GraphQL API.

Backend Developer

EXPOBANK

Russia, Moscow

January 2020 - April 2020

- Web Development using PHP 7.1, MySQL database, Javascript / JQuery, HTML 5, CSS 3.
- Worked as a part of team improving existing manager web interface for issuing and considering loans.

Skills

Languages Ruby / RoR, Go, SQL, bash

Tools Linux, Ansible, Docker, Git, Hugo, Neovim

Education

Plekhanov Moscow Technical College

B.S. IN INFORMATION SYSTEM AND PROGRAMMING

Russia, Moscow

May 2021
